

Log into the Admin UI

The Admin UI features a **Log in** page that appears after you configure administrator security access for Aspire.

*Aspire does not require administrator security access; it can run in **Anonymous** mode.*

Enable the Login Page

The **Log in** page will appear after you configure a security type option (*ConfigFile* or *LDAP*). The configuration for these types of security can be found in the [Admin UI Authentication](#).

Security configuration is set in **None** by default.

Username and Session

Without security

To use the default Aspire without security, an **Anonymous** user appears with no **Sign out** option.

- Aspire is not using any security to validate the user who accesses Aspire.
- This session will never expire.

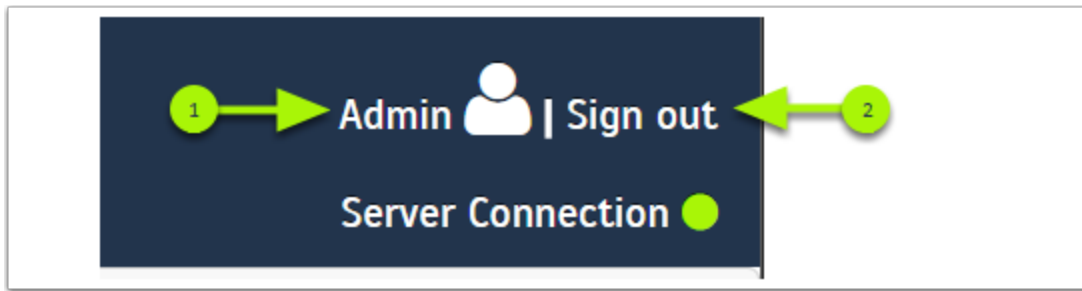

active user.

Anonymous - Indicates that there is no security verification for the

With security

After signing into Aspire, a **username** appears with a **Sign out** option.

- The session will last as long as the web page is active.
- If the web page is inactive for more than thirty minutes, the session expires and the user needs to log in again.

Username - Shows the name of the current user logged into Aspire for this session.

Sign out - Ends the current session and returns to the **Log in** page.
