

Changing the Aspire Port Address

By default, Aspire will run on port *50505*.

You can change this port address by editing the file **config/felix.properties**. Find the property **org.osgi.service.http.port** and change it to the desired port.

Also, if you want to run more than one instance of Aspire on the same server, remember to update the property **osgi.shell.telnet.port**, which by default takes *6666*. See [Accessing OSGi](#) for more details on what this port is for and how to remove it.

Example:

```
org.osgi.service.http.port=50505
#osgi.shell.telnet.port=6666
```

Updated to:

```
org.osgi.service.http.port=50506
osgi.shell.telnet.port=6688
```
