Aspire Help

Aspire Staging Repository

A staging repository (based on Node.JS) now exists

The Staging Repository application is an intermediate repository where content can be placed after it has been extracted from a content repository. It allows for content reprocessing without having to reach back to the content repository for every processing iteration. Call Search Technologies for more details. The previous staging repository will be deprecated.

Query Processing Language (QPL)

The Query Processing Language (QPL) is a scripting language for easily constructing very complex queries.

The QPL product is not part of the Aspire Content Processing product and is licensed under a separate agreement.

Frequently Asked Questions

Aspire Enterprise users - You should already have a support mechanism in place with a login to our support portal (https://support.searchtechnologies.com) . If you don't know your login details, please contact your account manager.

Aspire Community users - Please note that the Aspire Community does not include formal maintenance and support. However, questions and feedback are welcome and appreciated at community@searchtechnologies.com. We'll do our best to respond in a timely manner. To request a formal support agreement, you'll need to upgrade to Aspire Enterprise. For upgrade information contact Search Technologies.

Mailing Lists

Any users

Please email us - we will reach out to you shortly. If you are a current customer, please visit the support portal.
