

# Integration with Aspire

Aspire provides three components to interact with StageR. A publisher to write data from Aspire into a StageR storage unit and a connector and listener to read data from storage units into Aspire.

- [StageR Publisher](#) - writes the [AspireObject](#) from a job or the binary content of a file to a defined scope of a storage unit in StageR .
- [StageR Connector](#) - reads the content of each document of a storage unit scope into Aspire sub-jobs.
- [StageR Listener](#) - listens for content updates of documents of a storage unit scope and writes them into Aspire sub-jobs.

See [StageR Content Processing](#) for more details.
