

Aspire Cloudera Parcel Repository Creation

Installing the Parcel and the Service into a temporary parcel repository

Download the Aspire projects from <https://repository.searchtechnologies.com/artifactory/public/com/searchtechnologies/aspire/binaries/cdh-parcel/>

Note: You'll need to use your Aspire credentials to download the parcel binaries. For more details in the Aspire creation account process go to: [How to Access Aspire](#)

Step 1. Unzip Binaries File

1. Unzip the the cdh-parcel zip file of the Aspire version you need.

Step 2. Install the parcel service

1. Copy the file named **ASPIRE-3.2.jar** you have downloaded in the directory `/opt/cloudera/csd` in the machine where the Cloudera server is installed.

Step 3. Create a temporary parcel repository

1. A temporary parcel repository should be created following the steps inside this [link](#)
2. Copy the file named **ASPIRE-3.2-el7.parcel** on the parcel repository that you are going to use.
3. Update/create the manifest file, this can be done using this python script [make_manifest.py](#) with the following command:

```
python ./make_manifest.py /path/of/parcels/repository
```

This script runs on the repository server.
