FAST for SharePoint Introduction

Features

The FS4SP Publisher will send FAST documents to the FS4SP Content Distributor service. The Fast documents will contain the AspireObject's properties set by the user on a properties mapping file to map these properties with FS4SP Managed Properties previously created on the search engine.

Some of the features of the FS4SP publisher include:

- Customizable FAST Document to be sent to FS4SP using the properties mapping file
- Document batching
- Send documents to a specific collection
- Handle document level security using the SSA Proxy component
