

TeamForge Introduction

The TeamForge connector will crawl content from TeamForge server through its SOAP services.

Note: The TeamForge connector may be purchased separately.

Features

Some of the features of the TeamForge connector include:

- Ability to perform either full or incremental crawling (so that only new/updated documents are indexed)
- Fetches access control lists (ACLs) for TeamForge item-level security (Security is based on TeamForge users, groups and roles)
- Fetches metadata for retrieved content
- Is search engine independent. The content retrieved can be published by Aspire to any search engine
- Runs from any server with access to the given TeamForge repository and conforms to the [Hardware and Network Considerations](#) for Aspire.

Content Retrieved

The TeamForge connector retrieves several types of documents, listed below are the inclusions and exclusions of these documents.

Include

- Projects
- Discussions
- Documents
- Releases
- News
- Project pages
- Planning Folders
- Repositories
- Tasks
- Trackers
- Wiki services

Future Development Plan

The following features are not currently implemented, but are on the development plan:

- Ability to control what content is requested from the repository during crawling.

Anything we should add? Please [let us know](#).
