Documentum For Developers

Documentum Source

Detailed information on configuring the Documentum Source. Also includes a discussion of all of the metadata produced by the Source, with an example.

Documentum Fetch URL

Detailed information on the Documentum FetchUrl java component which opens an InputStream to the given URL which can be read by downstream pipeline stages. Only needed by programmers who might need to integrate the Documentumscanner in novel ways not supported by the standard framework and routing table.

Documentum Group Expansion

Detailed information on configuring the Documentum group expansion component. This is bundled with the Documentum connector, so this information on the component is only needed by programmers who might have custom Documentum integration needs.
