

Stop a Finished Crawl Process

A content source that has finished processing still shows up as "Running" in the UI despite clicking **Stop**. This prevents processing anything else on the content source.

Step-by-step guide

1. Go to the MongoDB for the content source, for example, using [Robo 3T \(formerly Robomongo\)](#) and locate the status collection.
2. Open the last entry and set the crawlStatus to "S" for Completed.
3. View the different values for the "status" collection at [MongoDB Collections Description](#).

You can also run a query in Robo 3T (formerly Robomongo) in the Content Source database to view the status of the last crawl:

```
db.getCollection('status').find({}).limit(1).sort({$natural:-1})
```
