

Box For Developers

Box Application Bundle

Detailed information on configuring the Box Application Bundle. Also includes a discussion of all of the metadata produced by the Application Bundle, with an example.

Box Source

Detailed information on configuring the Box Source. Also includes a discussion of all of the metadata produced by the Source, with an example.

Box Fetch URL

Detailed information on the Box FetchUrl java component which opens an InputStream to the given URL which can be read by down-stream pipeline stages. Only needed by programmers who might need to integrate the Boxscanner in novel ways not supported by the standard framework and routing table.

Box Group Expansion

Detailed information on configuring the Box group expansion component. This is bundled with the Box connector, so this information on the component is only needed by programmers who might have custom Box integration needs.
