

Yammer Connector Introduction

- [Features](#)
- [Content Retrieved](#)
- [Limitations](#)

The Yammer connector will crawl content from Yammer messages.

Features

Some of the features of the Yammer connector include:

- Retrieve messages
 - By Group
 - By Thread
 - By Topic

Content Retrieved

The Yammer connector retrieves Yammer messages, including some metadata. The metadata include:

- User (sender) details
- Group details
- Thread details

Limitations

Due to API limitations, Yammer connector has the following limitations:

- Messages are fetched serially, newest-to-oldest, due to the nature of the Yammer API. These have the following implications:
 - Incremental crawls take the same amount of time as full crawls
 - Aspire Distributed processing is not beneficial when using this connector.
