

# Yammer Connector Prerequisites

- [Version of Yammer API required](#)
- [User Account Requirements](#)
  - [Get A Bearer Token](#)
- [Windows or Linux](#)

## Version of Yammer API required

---

The Aspire Yammer connector was created and tested using the Yammer REST API V1. See [Rest API and Rate Limits](#) from the Yammer documentation.

## User Account Requirements

---

In order to access Yammer, a user account with sufficient privileges must be supplied. It is recommended the account belong to a Yammer administrator. A Bearer Token corresponding to this user is required by the connector.

### Get A Bearer Token

There are several ways to obtain a Bearer token for Yammer. Options include:

- Register an app in Yammer and [obtain token via OAuth](#) .
- Request a token from your [Yammer administrator](#).

## Windows or Linux

---

The Yammer connector runs on either Windows or Linux.
