

Azure Events Hub Connector Prerequisites

- [Version of Azure Events Hub required](#)
- [User Account Requirements](#)
- [Windows or Linux](#)

Version of Azure Events Hub required

The Aspire Azure Events Hub connector was created and tested using **Aspire 4.0**.

Before installing the Azure Events Hub connector, make sure that:

- Azure Events Hub is up and running

User Account Requirements

In order to access the Azure Events Hub connector, a connection must be established to a valid Azure Events Hub Service.

Microsoft Azure Events Hub is a service that is independent of Accenture Aspire technologies and licenses. For more information on Azure Events Hub see [Azure Events Hub on Microsoft](#). You can also see this link for information on how to [Create an event hub using Azure portal](#).

When creating the Event Hub you obtain the Namespace and Event Hub name. For the other 2 fields required for authentication, the SAS Key Name and the SAS Key, you can see [this article on how to obtain a connection string](#), and get the values from that connection string. The connection string template looks like this:

Endpoint=sb://<FQDN>;SharedAccessKeyName=<KeyName>;SharedAccessKey=<KeyValue>

Windows or Linux

The Azure Events Hub connector runs on either Windows or Linux.
