

AEM Connector Introduction

The Adobe Experience Manager (AEM) Aspire connector will crawl content from an Adobe Experience Manager server

On this page

- [Features](#)
- [Content Retrieved](#)
 - [Include](#)
- [Limitations](#)

Features

Some of the features of the AEM connector include:

- Fetches access control lists (ACLs) for document level security. For the current implementation only Closed Users Groups are supported as ACLs.
- Search engine independent
- Can filter content based on properties using expected values or patterns
- Filter pages base on the scheduled on and off time.
- Runs from any machine with access to the given to the AEM server
- Supports optional content fetching
- Connection throttling

Content Retrieved

The AEM connector retrieves several types of documents. Listed below are the inclusions and exclusions of these documents.

Include

- Page objects
- Asset objects

Limitations

Due to API limitations, the AEM connector has the following limitations:

- The JSON API needs to be enabled in the server for the connector to work.
