

Add Dynamic Fields

Here you can find the steps necessary to add a new dynamic field to the framework

Step-by-step Adding the Field Type

1. Create a class file type in **ui/src/app/field_framework/types**
2. Extend class from **DynamicField**
3. Add logic and overwrites as seen fit
4. Add the new type to the **FieldTypes** in **ui/src/app/field_framework/types/dynamic-field.ts**
5. Add type constructor to **ui/src/app/field_framework/types/field-factory.ts**

Step-by-step Adding the Field Component

1. Go to **ui/src/app/field_framework/components**
2. In console execute **ng generate component <component-name>**
3. Modify the new component as seen fit
4. Go to **ui/src/app/field_framework/directive/field-generator.directive.ts**
5. Go to **ui/src/app/field_framework/directive/field-generator.directive.ts**

These are the basic steps to add a new fields, more complex fields, may required assistance from the development team.
