

REST API - Azure Identity Connector Configuration

The Azure Identity Connector can be configured by using the REST API. The following pages describe the necessary objects to be created:

Credentials

Configure the Credentials to be used by the Connection object when using the Aspire REST API.

Connection

Configure the Connection to be used by the Azure Identity Connector when using the Aspire REST API.

Connector

Configure the Azure Identity Connector properties when using the Aspire REST API.

Seed

Configure the Seed for the different Azure Identity Connectors when using the Aspire REST API.
