Aspire 5.0.1

NoSQL DB provider supported by the Aspire 5.0.1 release:

• Elasticsearch/Kibana versions 7.9.2

Java version supported

• OpenJDK 11

New Features

- Aspire Framework
 - o Parametrize sharding parameters on index creation.
 - Consistency for all the environment variable names.
 - Handling HTTP error code 429 for the ES provider.
- Aspire UI
 - o Guided Tour!
 - o Type ahead for Connectors.
 - Start crawl option on popup menu for failed crawls.
 - Added search bar for type selector.
 - Option to pin the left-side menu.
 - User friendly HTTP error code 401.
- Connectors
 - o Aspider
 - o RDB Tables
 - RDB Snapshot
 - ∘ REST
 - o Selenium
 - SMB
- Publishers
 - o File System
 - New JSON format as default output.

Bugs Fixes

- Aspire Framework
 - o Fixed connections leak.
 - Missing entries from QueueEntry.
 - NPE selecting connector type.
 - Improved error handling for crawl in progress.
 - o Throttling being applied per Seed, when it should be applied per Policy. Known issue on 5.0.
- Connectors
 - General
 - Possible massive deletes and incorrect "completed" crawls when they should be "failed".
 - Scan recursively option not working as expected.
 - Crawl marked as completed with invalid server URL.
 - Workflows could not be updated, not being used by any Seed.
 - Removed unnecessary properties for the aspire properties file.
 - File System
 - UncheckedExecutionException generating hierarchy info with Index Containers checked. Known issue on 5.0.
 - Set stop on scanner error.
 - o Publishers
 - General
 - Removed the Index Dump option from the DXF.
 - ° UI
- No redirect page for 401 message (unauthorized) accessing Aspire Debug Console. Known issue on 5.0.
- Failed Documents -> Error Retry Patterns section with temporary checkbox to enable it and it requires at least 2 items to work. Known issue on 5.0.
- DXF not enforcing minimum count on multiple fields.
- Refresh button clearing selections in the dropdown.
- No rows to show after deleting item in the 2nd page.
- Enlarged Bulk actions popup for Seeds.
- Set of buttons of the Groovy Playground page enabled on the bottom.

- DXF validation for URL fields not allowing underscores.
- ASPIRE-10356: Saving with just white spaces.

Known Issues

- Aspire Framework
 - o Improve Job cleanup for idle connectors.
 - Manager source info initialization errors.
 - Nodes are not shutting down in the time expected, having Elasticsearch down.
 Throttling is considering control items during the crawl.
- Aspire UI

 - Seeds field should be required for any type of Schedules.
 UI actions are limited for users with both Admin and Operator roles.
 Edit page for Seeds loading empty rare times.

 - Add Delete Policies to Connections UI (all connector types).
 Some UX issues on navigation (page size, tag filter, etc.)
 Resizing name column does not do the same for the text contained.
- Connectors
 - o RDB Tables:
 - No recovering action after killing the NoSql Provider during a crawl.
 - - ID attribute appearing twice once published.
 - SharePoint Online
 - Error crawling long URLs.
- Publishers
 - o Elasticsearch
 - HTTPS option not supported for the 'Host and port' option.
